

CADET

RADIO TRANSMITTER

Kar-Tech's CADET transmitter series rounds out our pistol-grip line of products with a small, heavy-duty enclosure ready to tackle simple boom control and other industrial remote control applications that benefit from its hall-effect proportional trigger for speed control or deadman functionality.

The CADET is molded from a highly-impact resistant polypropylene copolymer that is shatter resistant in extended temperatures. Most CADET configurations allow for tethered control as a backup, and we make these in hard-wired versions as well for simple control pendants that actually look good! The CADET's normal configuration is for six toggle switches and an E-Stop; as with most Kar-Tech products, we can build these to your specifications as well.

Given the massive amount of customization available, we don't currently stock the CADET—it's designed for OEM use only, but we're happy to help configure a system for you.

Custom configurations available to fit any application.

All Kar-Tech radios include:

- Intelligent power management
- EasySync RF teach
- Two-way communication
- Actively protected & monitored I/O
- Real-time feedback
- Active safety checking
