

MK SERIES

RADIO TRANSMITTER

Our MK-Series radio remote transmitter is available in 2, 4, 6, or 8 button configurations, with all the button styles being configurable. Our dual-speed pushbutton is a common option - the second position normally goes to a second coil or contactor for high speed when the pushbutton is fully depressed. Rather than reinvent the wheel, we decided to stick with a common, known, proven handheld style, and take it wireless. Without a power-switch, the MK-series leverages our instant-on/instant-off technology. Press a button and the transmitter instantly wakes itself up and starts transmitting, then turns off to conserve battery life. Because of this, it's best suited to momentary control applications.

The enclosure is seriously durable, and while it might look like a simple pendant, the internal electronics are still all high-spec SMT. Twenty hours of actively transmitting operating life is a typical minimum with our AAA batteries.

We love designing these into new OEM applications and bringing out some of the other hidden features, but we also recognize that sometimes a guy just needs a remote quickly. We keep several flavors of MKs in stock all the time to get you up and going for a simple one-off project, or a fast proof-of-concept. We're happy to help get you in to the right one.

**Off-the-shelf systems
ready to ship today!**

*Custom configurations
also available to
fit any application.*

All Kar-Tech radios include:

- Intelligent power management
- EasySync RF teach
- Two-way communication
- Actively protected & monitored I/O
- Real-time feedback
- Active safety checking
