

MINI

RADIO TRANSMITTER

Kar-Tech broke ground with the MINI series radio transmitter. It was one of the first low-cost, high-performance wireless remote controls for the mobile market. To this day, we still produce them in several versions for many customers. It's housed in an ABS enclosure with the best membrane keypad we've been able to find. Nice, clicky action with a high pillow emboss for good tactile feedback, so your fingers can easily locate the buttons and know when they're pressed. It can get you out to 300', with full FHSS at 900MHz for secure, interference-rejected communication, in it's small size. We've got a belt clip on the back so you can get it out of the way on a pocket, belt, or visor.

The MINI runs on two internal AAA batteries, and provides a solid twenty hours of actively transmitting battery life. Like most of our other products, it's got two LED's on the face for RF status and error code feedback. It'll tell you on the transmitter whether you have wiring problems on your machine. Additionally, the MINI is *smart*. Our standard, off the shelf versions are highly programmable. You can set each output individually as momentary or maintained/latching action, assign an auxiliary "pump" output to come on in parallel with each button individually, and customize the sleep time, E-Stop mode, etc.

Off-the-shelf systems
ready to ship today!

All Kar-Tech radios include:

- Intelligent power management
- EasySync RF teach
- Two-way communication
- Actively protected & monitored I/O
- Real-time feedback
- Active safety checking
