

PACKER

RADIO TRANSMITTER

Kar-Tech's ELITE series radio remote control is one of the largest bellypacks in our lineup. It was designed with consideration towards large off-highway vehicles that need several axes of proportional hydraulic control. Highly flexible and customizable, the ELITE can make use of nearly all of our control interface options.

The ELITE series is ruggedized and weatherproofed, and ships with shoulder straps by default, which provides operators with a level working surface. In normal configurations, the ELITE offers up to 30 hours of active working battery life between charges, and will operate at a distance of up to 2,500 feet.

All Kar-Tech radios include

- Intelligent power management
- EasySync RF teach
- Two-way communication
- Actively protected & monitored I/O
- Real-time feedback
- Active safety checking

Typical applications

- Digger derricks
- Drilling equipment
- Large chippers & grinders
- Rail vehicles
- Concrete pumps
- Road equipment

Standard & custom configurations available to fit any application.
